```

This makes every product page:

- ✓ Longer content
- ✓ Keyword relevant
- ✓ Internally linked

## 4 AUTO INTERNAL LINKING (IMPORTANT)

Inside product template footer, add:

```
<p>This product belongs to our<a href="{{ product.collections.first.url }}">{{ product.type }} collection</a> available in the Philippines.</p>
```

Now every product links back to its category automatically.

## 5 BULK FAQ SECTION FOR PRODUCTS

Add this collapsible section under all products:

```
<h2>Product FAQs</h2>
```

```
<h3>Is this {{ product.type | downcase }} suitable for homes in the Philippines?</h3>
```

```
<p>Yes, this product is designed for residential and commercial use in the Philippines.</p>
```

```
<h3>What interiors match this design?</h3>
```

```
<p>This {{ product.type | downcase }} works well with modern, minimalist, and contemporary interiors.</p>
```

## **6 BULK SCHEMA (DONE ONCE)**

Your Shopify theme should include Product schema globally.

If not, it can be added once in the product template.

## **WHAT THIS DOES FOR YOU**

Instead of 3,000 weak pages, you get:

- ✓ 3,000 keyword-optimized pages
- ✓ Strong category relevance
- ✓ Internal link network
- ✓ Better rankings for “product type philippines” searches

Below is a **copy-paste Shopify Liquid block** your developer can add **once** to your product template so **all product pages** get:

- Better SEO copy (H2 sections + natural keywords)
- Auto internal link back to the *best* category
- FAQ content (visible + indexable)
- Optional JSON-LD FAQ schema (same FAQs)

## **Where to paste this (Shopify)**

### **If you're on OS 2.0 (most likely)**

Go to:

Online Store → Themes → Edit code → `sections/main-product.liquid`

Find where the product description renders (often contains):

```
{{ product.description }}
```

Paste the block **right under it**.

## ✓ Copy-paste Liquid block (SEO + Internal Links + FAQs)

```

## 2 small but important upgrades (high impact)

### 1) Make sure **product.type** is filled

This block uses **product.type** for "Table Lamp", "Pendant Light", etc.

If your catalog doesn't consistently use Product Type, your SEO will be weaker.

**Rule:** every SKU must have a Product Type set.

### 2) Add "material/style" variation automatically (optional)

If you tag products like `marble`, `brass`, `glass`, we can make the text **unique per SKU** (reduces "duplicate content feel" across thousands of products).

If you say "yes", I'll give you the tag-based enhancement version.
